Edwin Pile Prazeres

Software Engineer | Full-Stack, C#/.NET & React

Tonka Avenue, Colorado Springs, CO | LinkedIn | +507 6359 4079 | epilepra@gmail.com | Github

PROFESSIONAL SUMMARY

- Software Engineer with 5+ years of professional experience building and operating production web applications across frontend and backend systems.
- Hands-on experience with React, TypeScript/JavaScript, Node.js, C#/.NET, REST and GraphQL APIs, SQL Server, Azure Cosmos DB, and Microsoft Azure.
- Experienced in full-stack feature delivery, microservices, asynchronous and event-driven workflows, production troubleshooting, automated testing, and code reviews. Strong track record of navigating unfamiliar codebases, investigating complex issues end-to-end, and delivering features from implementation through production.
- Master's degree in Software Engineering. Fluent in English, Spanish, and Portuguese.

TECHNICAL SKILLS

Languages & Framework: C#, JavaScript, TypeScript, SQL
Frontend: React, React Native, HTML5, CSS3, Tailwind, MUI
Backend & APIs: C#/.NET, ASP.NET Core, REST APIs, GraphQL/HotChocolate, Node.js,, API versioning, microservices, asynchronous processing, event-driven systems
Databases: SQL Server, Azure Cosmos DB, NoSQL, data modeling database migration and transformation
Cloud & Distributed Systems: Microsoft Azure, Azure Functions, Azure Service Bus, Azure Blob Storage, Azure API Management, Application Insights, webhooks, queues, event-driven integrations
Testing: xUnit, Jest, unit testing, integration testing
Engineering: API design & versioning, microservices, dependency injection, SOLID, repository pattern, CI/CD, Swagger/OpenAPI, code review
Tools: Git, Postman, Azure DevOps

PROFESSIONAL EXPERIENCE

Software Engineer
Control Risks S.A – *March 2023 – Present* | *Panama*

- Promoted to Mid-Level Software Engineer based on demonstrated technical autonomy, delivery performance, production support, code quality, and contribution to team productivity.
- Developed V2 of an asynchronous API product from initial implementation through production, replacing synchronous workflows for report generation, match searches, and screening creation with asynchronous processing, queues, workers, and result notifications/polling.
- Contributed to the migration of a growing monolithic application from SQL Server to a microservices architecture using Azure Cosmos DB, including endpoint migration, data mapping and transformation, schema adaptation, migration code, validation, and end-to-end testing.
- Worked with Azure Cosmos DB data models and hierarchical composite partition keys for screening data, adapting existing SQL-based access patterns to the new document-oriented architecture.

- Investigated and implemented a resumable video upload workflow for files up to 800 MB using React, C#, and Azure Blob Storage, including chunked uploads, parallel processing, status-based recovery, retry handling, duplicate protection, and incomplete-upload cleanup.
- Investigated production incidents across distributed services by reproducing issues end-to-end, tracing data through APIs and event-driven workflows, identifying outdated business logic, implementing targeted fixes, and validating changes without regressions.
- Investigated asynchronous third-party data flows and identified edge cases affecting a small subset of due-diligence monitoring results; reproduced the issue in an isolated endpoint, validated the hypothesis, and implemented the required business logic.
- Built proof-of-concepts to evaluate technical approaches, including Aspire for local multi-service orchestration and chunked file uploads for reliable large-file transfers.
- Implemented unit and integration tests using xUnit and Jest, covering business logic, expected error conditions, and integration flows;
- Conducted code reviews and paired programming, identifying logic issues, duplicated implementations, maintainability concerns, and opportunities to reuse established patterns.
- Supported teammates with technical blockers by independently navigating unfamiliar codebases, tracing application flows, and helping determine implementation approaches.
- Led daily stand-ups and represented the team during incidents and operational discussions when the manager was unavailable.

Web Specialist
Live And Invest Overseas – *September 2020 – October 2022*

- Developed and maintained responsive WordPress sites with custom page templates, reducing bounce rates by 23% and improving user engagement.
- Conducted performance audits and applied CSS and JavaScript optimizations to achieve 20% faster page load times.
- Applied website security and compliance by applying best practices in plugin management, access control, and regular vulnerability assessments.

EDUCATION

Master's Degree In Software Engineering
Technological University of Panama, Panama City, Panama (2023 – 2025)
Mechatronic Engineer
University of Panama, Panama City, Panama (2015 – 2021)

LANGUAGES

Spanish: Fluent
Portuguese: Fluent
English: Professional
